# PROJECTS

#### React Todo app 🛮

This a web application built using the React framework, which allows users to create and delete tasks in a todo list. The app uses a modern, responsive user interface that enables users to easily manage their tasks.

### Weather App 2

A weather app using HTML, CSS and JavaScript. Fetch the weather from the openweather app using fetch api.

# Calculator 🗆

A simple landing page using HTML and CSS. This webiste is for burger shop who provides all the information of thir services at this landing page.

#### Covid-19 statistics [3]

A COVID-19 statistics website built with HTML, CSS, JS, and API is a web application that displays up-to-date COVID-19 data such as the number of cases, deaths, and recoveries in various countries and regions around the world.

The HTML is used to structure the website and define the content that will be displayed, such as the layout of the clock and any additional features that may be included. The CSS is used to style the website and customize the appearance of the clock, such as the font, colors, and background.
